CAREER OBJECTIVE

AI-focused Developer specializing in Agentic AI (LangChain) and Machine Learning. Proficient in building production-ready RAG systems and predictive models using Scikit-learn. Experienced in rapid prototyping and full-stack AI deployment.

EDUCATION

Sushila Devi Bansal College of Technology, Indore

2022–Present

B.Tech – Computer Science & Engineering | GPA / CGPA: **7.33 (till 7th Semester)**

- Participated in group projects and classroom discussions, developing teamwork and analytical thinking.
- Maintained consistent academic performance across all semesters.

KEY SKILLS

Generative AI & LLMs	LangChain, RAG Systems, Multi-Agent Workflows, Vector DBs (Pinecone).
Data Science & ML	Python (Pandas, Scikit-learn), SQL, Predictive Modeling, GridSearchCV.
Web & Backend	FastAPI, Streamlit, MongoDB, PostgreSQL, SQLAlchemy.
Vibe Coding	AI-Augmented Development (Claude, Cursor), Prompt Engineering, Rapid Prototyping.
Tools	Git, GitHub, Render, Postman, Power BI.

ACADEMIC / PERSONAL PROJECTS

AI-Powered Medical Diagnosis RAG System | [View Project](#)

Jan 2026 – Feb 2026

- **Technologies:** Python, FastAPI, LangChain, Pinecone, MongoDB, Streamlit, Groq (Llama-3-8B), Google GenAI Embeddings, Render, Streamlit Cloud.
- Architected an end-to-end Modular Medical RAG application utilizing LangChain and FastAPI with Role-Based Access Control (RBAC). Designed a NoSQL database schema using MongoDB to manage hashed user credentials, document metadata, and historical diagnosis logs. Integrated ChatGroq to generate precise medical summaries from retrieved Pinecone vector chunks and deployed the system using Render and Streamlit Cloud.

Vendor Invoice Intelligence Machine Learning Portal | [View Project](#)

Dec 2025 – Jan 2026

- **Technologies:** Python, SQL, PostgreSQL, Scikit-learn, Pandas, SQLAlchemy, Streamlit.
- Developed an end-to-end production-ready machine learning system featuring a Linear Regression model for freight cost prediction and a GridSearchCV-tuned Random Forest classifier for high-risk invoice flagging. Engineered data pipelines connected to a cloud-based PostgreSQL database via SQLAlchemy and deployed the final solution as an interactive Streamlit web application.

Multi-Agent AI Research System | [View Project](#)

Jan 2026

- **Technologies:** Python, LangChain, OpenAI / Groq API, Tavily API, BeautifulSoup, Streamlit.
- Developed a fully autonomous agentic AI system with shared state memory. Engineered specialized agents (Search, Reader, Writer, Critic) leveraging LangChain (create_agent) and LCEL pipelines to scrape live internet data and generate structured research reports.

CERTIFICATIONS

- **Group Communication** — Saylor Academy (Feb 2025)
- **JavaScript (Intermediate)** — HackerRank (Feb 2025)
- **Python (Basic)** — HackerRank (Feb 2025)
- **Claude Code in Action** — Antropic (Apr 2026)
